The Television History Book

Michele Hilmes

The television is one of the most prominent inventions of the 20th Century. It has become one of the most common ways people view the world. After 1945 television sales in America skyrocketed. The first colour broadcast was made in 1954. Throughout the rest of the world, television came years later, and it wasn’t until the late 1960s that a television was commonplace in houses throughout the West.

At the dawn of television history, two competing experimental approaches led to the breakthroughs that eventually made the technology possible. Early inventors attempted to build either a mechanical television based on Paul Nipkow's rotating disks or an electronic television using a cathode ray tube developed independently in 1907 by English inventor A.A. Campbell-Swinton and Russian scientist Boris Rosing. German scientist Karl Ferdinand Braun entered history books by inventing the cathode ray tube (CRT) in 1897. This "picture tube," which for years was the only device that could create the images viewers saw, was the basis for the advent of electronic television.
TV has been celebrated and decried in print since its inception; the medium’s ongoing Golden Age has fostered an audience eager to read about its favorite shows after the credits roll and a cohort of critics, authors, and scholars prepared to satisfy that appetite. That means there might be more vital books about TV on the shelves by the end of 2016 until then, try supplementing The A.V. Club’s previous TV reading list with the 19 titles that follow. 1. The Complete Directory To Prime Time Network And Cable TV Shows 1946-Present by Tim Brooks and Earle Marsh (1979). The first edition of the de History of the Television. Television, commonly referred to as TV, is a popular telecommunication medium. The gadgetry associated with a TV set is primarily for transmitting and receiving monochromatic or color ‘moving’ images. The sound accompaniment has made television transmission the most extensively used communication medium. The word ‘television’ has its roots in the Latin and Greek languages. The word is derived from the Greek word ‘tele’, which translates as ‘far sight’ and the Latin word ‘visio’, which means ‘sight’. The inve Television (TV) is a technology that enables the transmission of full motion broadcasts to remote receivers. A television is the device that is used to watch the broadcasts, and is also the name used for the entire process from filming to broadcast and receiving. These days TVs are ubiquitous in the western world and increasingly popular in less developed nations with estimates that by the middle of the 21st century every home will have at least one television. The idea of using television to entertain occurred quite late in the development of the technology, in fact the first uses for TV were
